

Seo Hyeonseo

Computer Science and Engineering

Seoul National University

2023 - Present

About Me

I am a Computer Science and Engineering student at Seoul National University.

My primary interests are **system security**, **operating systems**, and **artificial intelligence**. I enjoy understanding how computer systems work at a low level and how secure systems can be designed by studying both offensive and defensive security techniques.

I am currently studying system hacking and binary exploitation through Dreamhack and personal projects.

Areas of Interest

- System Security
 - Operating Systems
 - Computer Architecture
 - Network Security
 - Binary Exploitation
-

Technical Skills

Programming Languages

- C
- C++
- Python
- Java

Tools & Platforms

- Linux
- Git & GitHub
- GDB / pwndbg
- pwntools
- IDA Pro
- Ghidra

Security Topics

- Buffer Overflow

- ROP (Return-Oriented Programming)
- NX / ASLR / PIE / RELRO
- libc Leak
- Return-to-Shellcode

Projects

Restaurant Recommendation Platform for Exchange Students

Designing a web platform that helps international students discover restaurants near Seoul National University based on preferences and recommendations.

Dreamhack System Hacking Studies

Hands-on practice with binary exploitation and vulnerability analysis using Linux, GDB, pwntools, IDA, and Ghidra.

Courses I Plan to Take

- Operating Systems
- Computer Networks
- Computer Security
- System Programming
- Computer Architecture
